

# Two $\mathfrak{b}$ or not two $\mathfrak{b}$ ?

Rafał Filipów

January 2026

I will talk about two versions of the bounding number  $\mathfrak{b}$ . The first one was considered by A. Kwela and myself in “Yet another ideal version of the bounding number” (J. Symb. Log. 87 (2022), no. 3, 1065–1092) and the second was examined by J. Brendle and D. A. Mejia in “Rothberger gaps in fragmented ideals” (Fund. Math. 227 (2014), no. 1, 35–68).
